Modify the RAM and storage for the created virtual machine.

Aim:-
To modify the RAM and storage for created virtual machine using VMware Workstation.

Procedure:-

Make sure your virtual machine is shut-down and not running.

Open VM Virtual Box and select the virtual machine you want to modify from the list of VM.

Click on the 'Settings' button in the top menu.

In the 'setting' window, click on the system tab on the left-side.

Under the 'Motherboard' tab, you can modify the amount of RAM to 10GB that is allocated to your VM by sliding the 'Base memory' slider or entering the value '25GB' manually in the text box.

To modify the virtual hard disk, click the 'Storage' tab on the left-hand of the 'setting' window.

Select the virtual hard disk you want to modify from the list of storage devices and click on 'attribute' button

Output :-

Bhavani. A

Devices

memory : 9.2 GB.

processors : 2
